

JAGGAER CONTENT BRIEF

CBAM & the Carbon Cost of Your Supply Chain: What Procurement Needs to Know Now

TOFU · Geography: DE · FAQ Article · Cluster anchor piece · Informational

Brief at a glance

URL SLUG	/cbam-procurement-compliance-manufacturing (technical slug only — mirrors the primary keyword; H1 and framing untouched)
CONTENT TYPE	FAQ Article — Tariff & Trade Disruption cluster anchor (per project brief). First piece in the entire Discrete Manufacturing pillar — no pillar page yet, no cluster spokes yet. Flag for the content calendar: this piece seeds both the pillar and the cluster at once.
TARGET WORD COUNT	2,000–2,400 words — anchor-depth, delivered as Q&A pairs grouped into 6 themed sections (matching the FAQ Article content type) rather than narrative prose. This regulatory topic — timeline, thresholds, pricing, a DE-specific authority — needs more ground than a typical FAQ piece, even though each answer stays short and self-contained.
TARGET AUDIENCE	Procurement and supply chain professionals at German manufacturing companies who import CBAM-covered goods, components, or materials from outside the EU (cement, iron & steel, aluminium, fertilisers, electricity, hydrogen) and need a plain-language answer to "does this apply to us, and what do we actually have to do." TOFU: many are only just learning the definitive regime is live and that the rules changed again in October 2025.
FUNNEL / GEO / PATH	TOFU · Geography: DE · Publishing Week 1 (per project card)
PRIMARY KEYWORD	CBAM procurement compliance manufacturing — stakeholder-specified, kept exactly as given. Does not appear in either keyword export pulled for this brief (see Section 2). Drives H1/title/framing only.
SECONDARY KEYWORD	carbon border adjustment supply chain cost — stakeholder-specified, kept exactly as given. Same caveat: no measurable volume in either export.
PILLAR PAGE LINK	No pillar page exists yet (this is the first Discrete Manufacturing piece) and no cluster spokes exist yet to link down to. Once the pillar page and additional Tariff & Trade Disruption spokes publish, this anchor's linking plan (Section 5) needs a follow-up pass.
PUBLISH PRIORITY	High — CBAM's definitive regime went live 1 January 2026 and the compliance rules were materially simplified again in October 2025 (Regulation (EU) 2025/2083); this is a live, fast-moving regulatory topic with a genuine content gap (see Section 1) and real time-pressure for the target reader.

1. Search intent analysis

The reader has heard "CBAM" mentioned somewhere — a supplier email, a trade bulletin, a headline — and wants a fast, reliable orientation: does this apply to us, what changed, what do we do next. This isn't for a compliance officer who already knows the mechanism; it's a "catch me up, current rules" piece for a procurement generalist. Much existing CBAM content is already stale — still referencing the pre-October-2025 €150-per-consignment threshold — so being current is a big part of this piece's job.

What the reader needs to leave with

- A one-sentence definition of what CBAM actually taxes and requires, and why it exists (preventing carbon leakage).
- Whether their company likely needs to act at all — the October 2025 simplification exempts many importers outright below a 50-tonne annual threshold, which is genuinely new information most existing content hasn't caught up to.
- The concrete dates that matter right now: definitive regime since 1 January 2026, enforcement of the authorised-declarant requirement from 1 April 2026, certificate purchase obligations starting 2027, first declaration due 30 September 2027.
- Who to actually contact in Germany (DEHSt) and where procurement fits into the compliance chain — supplier emissions data, not just customs paperwork.

SERP features to target

- **Featured snippet** — 2–3 sentence definition of CBAM and who it applies to, directly under the H1.
- **People Also Ask** — since the content type is FAQ Article, nearly every H2 is itself PAA-shaped; Section 6 doubles as the FAQPage schema source, not a bolted-on afterthought.

Competitive gap: CarbonChain's compliance guide is strong on emissions-calculation depth but gated behind an email form. CMS Law's legal-update series is accurate and current but written for a legal audience, not procurement. Austrian Standards' CBAM page is the strongest single competitor — a well-built "CBAM in a nutshell" plus FAQ plus prep checklist — but it's Austria-branded, commercially oriented toward selling verification services, and doesn't foreground procurement's role. None connect CBAM to a procurement team's actual workflow — supplier onboarding, RFP criteria, contract clauses — which is the gap this piece can occupy.

STAKEHOLDER NOTE

Primary/secondary keywords are stakeholder-set, kept exactly as given. Neither appears in either keyword export pulled for this brief — a 549-keyword "procurement compliance" export and a 446-keyword "carbon border adjustment" export (see Section 2). Both stay in place as topical anchors, not ranking bets.

REGULATORY ACCURACY NOTE

CBAM's rules changed materially in October 2025 (Regulation (EU) 2025/2083) and again with the definitive regime's 1 April 2026 enforcement start. Every date and figure here was verified against the European Commission and DEHSt directly — see Section 8. Competitor content reviewed for this brief must not be used to source facts for the draft; if a stat can't be traced to an official source, cut it.

2. Target keywords

Primary & secondary (topical anchors — kept exactly as specified)

KEYWORD	MSV	KD	INTENT
CBAM procurement compliance manufacturing	~0	n/a	Stakeholder-set primary — drives H1/title/framing, unchanged
carbon border adjustment supply chain cost	~0	n/a	Stakeholder-set secondary — kept as-is, unchanged

Two keyword exports were pulled for this brief: a 549-keyword "procurement compliance" export (5,430 total volume, avg. KD 15%) and a 446-keyword "carbon border adjustment" export (2,430 total volume, avg. KD 42%), later trimmed to 93 EU/DE-relevant terms. Both were reviewed in full. The table below keeps only genuinely on-topic, non-redundant terms.

Supporting keywords — trimmed to the essential, non-redundant set

KEYWORD	MSV	KD	INTENT
carbon border adjustment mechanism	590	48	Informational — head term, CBAM's formal EU name
procurement compliance	590 (US)	17	Informational — strongest low-KD generic anchor found
eu carbon border adjustment mechanism metals enforcement 2025	320	21	Informational/Commercial — best combined opportunity, see callout below
procurement governance and compliance	320	10	Informational — ultra-low KD
eu carbon border adjustment mechanism	110	46	Informational
procurement and compliance	140	7	Informational — lowest KD found across both exports
carbon border adjustment	50	49	Informational
what is procurement compliance	40	n/a	Informational — question, FAQ-shaped
is eu cbam the world's first border carbon adjustment	20	n/a	Informational — question, FAQ-shaped
best software for cbam compliance (eu carbon border adjustment mechanism)	10	n/a	Commercial — thin volume, but the one term tying directly to a procurement-software angle

ULTRA-LOW KD CALLOUT

eu carbon border adjustment mechanism metals enforcement 2025 (320 MSV, KD 21) is the strongest opportunity in this brief — real volume, moderate-low difficulty, and it names "metals" and "enforcement" directly, which ties to two of CBAM's actual covered sectors (iron & steel, aluminium) and to the compliance angle this piece leads with. **procurement and compliance** (KD 7) and **procurement governance and compliance** (KD 10) are the lowest-difficulty terms found in either export, though they're generic rather than CBAM-specific — useful for the intro and framing, not for carrying the piece's core topical authority.

Trimmed out: Manhattan Beach procurement reform (local municipal, off-topic), pharmaceutical compliance regulations procurement (different vertical), and a long tail of DoD/FEMA/procurement-conference/certification-training terms from the broad "procurement compliance" export — none relevant to CBAM. Also trimmed: Canada, UK, US, and Armenia-specific CBAM variants (wrong geography for a DE-targeted brief) and near-duplicate phrasing (e.g. "eu's carbon border adjustment mechanism," "border carbon adjustment," "carbon border adjustment mechanism cbam," and a solar-panels variant — solar panels aren't a current CBAM sector). No corrections were made to the stakeholder-supplied primary/secondary keywords themselves; no additional primary or secondary anchor terms were added beyond the two given, per standing instruction.

3. Recommended page structure

H1 (Title)	CBAM & the Carbon Cost of Your Supply Chain: What Procurement Needs to Know Now (kept exactly as specified)
Meta title	CBAM Compliance for Procurement Teams (2026) — 44 characters
Meta description	CBAM's definitive regime is live and the rules changed in Oct 2025. See what German manufacturers must do now. — 110 characters
Intro (100-150 words)	Snippet-ready 2-3 sentence definition of CBAM, why procurement (not just customs or finance) needs to own part of this, and the October 2025 rule change as the freshest hook. Work "procurement compliance" naturally in. Preview the 6 sections below.
H2: CBAM Basics — What It Is and Who It Applies To	Q&A cluster: what CBAM is, why it exists (carbon leakage), the six covered sectors (cement, iron & steel, aluminium, fertilisers, electricity, hydrogen), and whether it's a tax or a certificate mechanism. Use "carbon border adjustment mechanism" naturally.
H2: Timeline — What's Already Happened and What's Next	Q&A cluster: transitional phase (Oct 2023-Dec 2025), definitive regime from 1 Jan 2026, grace period to end of March 2026, enforcement from 1 April 2026, certificate obligations from 2027. Primary visual (timeline) goes here (Section 4).
H2: The October 2025 Simplification — Do You Even Need to Comply?	Q&A cluster: the 50-tonne annual de minimis exemption (Regulation (EU) 2025/2083) replacing the old €150-per-consignment rule; no exemption for electricity/hydrogen; how to check exposure. This is the freshest, most differentiating section — lead with it in any promotion. Secondary visual (decision checklist) goes here (Section 4).
H2: What CBAM Actually Costs	Q&A cluster: how the certificate price is set (EU ETS auction price), the published Q1/Q2 2026 prices, quarterly-then-weekly pricing cadence, and the deduction available if a carbon price was already paid at origin. Use "eu carbon border adjustment mechanism metals enforcement 2025" naturally if discussing metals-sector exposure.
H2: What This Means for Procurement, Specifically	Q&A cluster: requesting verified supplier emissions data, where CBAM shows up in RFPs/contracts/supplier onboarding, and what happens if a supplier can't provide verified data (default values mean higher cost). This is the differentiation section — flag for product marketing sign-off before naming any specific JAGGAER capability.
H2: Germany-Specific — Who to Contact and How to Register	Q&A cluster: DEHSt as Germany's National Competent Authority, registry access via the Zollportal. This section exists specifically because geography = DE; don't generalize it to "your national authority" language.
H2: FAQ	Any remaining questions not covered in the 6 clusters above — see Section 6 for the full target list, grouped by theme, all schema-eligible.
H2: Next steps	Link to the official EU and DE sources (Section 5), and to the Discrete Manufacturing pillar page / other Tariff & Trade Disruption spokes once they exist. No new information here.

4. Visual production notes

Primary visual

A horizontal timeline: transitional phase (1 Oct 2023–31 Dec 2025) → definitive regime begins (1 Jan 2026) → grace period ends / enforcement begins (1 Apr 2026) → certificate purchases begin, Common Central Platform live (Feb 2027) → first declaration & certificate surrender due (30 Sept 2027). Appears under H2: Timeline, within the first two scrolls.

Secondary visual

A simple decision-flow checklist for "do you need to comply": (1) Do you import any of the six CBAM sectors? → (2) Is it electricity or hydrogen? If yes, no threshold applies, comply regardless of volume. If no → (3) Do your CBAM-goods imports exceed 50 tonnes (net mass) in the calendar year, per importer? Under 50 tonnes = exempt from reporting, declaration, and certificate-surrender obligations as of the October 2025 simplification. Appears under H2: The October 2025 Simplification.

SIGN-OFF NEEDED

Do not name a specific JAGGAER module or make a specific capability claim (e.g. "JAGGAER automatically tracks supplier CBAM emissions data") anywhere in this piece without product marketing confirmation of current feature scope. This is a new pillar with no prior JAGGAER-specific claims to fall back on — unlike the AI in S2P pillar, there's no existing "what Claude delivers" article to cross-link for context here.

5. Internal linking plan

Pillar page — Discrete Manufacturing	Does not exist yet — TBC once built. Flag as a follow-up linking pass, not a placeholder link.
External — European Commission, CBAM overview	"the European Commission's official CBAM guidance" · CBAM Basics section + Next steps
External — European Commission, Price of CBAM certificates	"the EU's published CBAM certificate prices" · What CBAM Actually Costs section
External — DEHSt (German Emissions Trading Authority)	"Germany's CBAM authority, DEHSt" · Germany-Specific section
Product — JAGGAER (module TBC, pending sign-off)	"JAGGAER's supplier and sourcing tools" · What This Means for Procurement section

This is the only piece in the project so far that links externally to non-JAGGAER, non-competitor sources as core citations rather than just as reviewed-but-not-cited competitive context — appropriate here because the reader benefits directly from being pointed to the official EU and German government sources for a compliance topic like this.

6. FAQ targets

16 questions, grouped by theme — more than the template's default 8–10, because the content type is FAQ Article: the FAQ is the article, not a supplementary section. All are FAQPage-schema-eligible (Section 7).

CBAM Basics

- What is CBAM, in plain terms?
- Why did the EU introduce CBAM?
- Which goods and sectors does CBAM currently cover?
- Is CBAM a tariff, a tax, or something else?

Timeline

- What happened during CBAM's transitional phase (2023–2025)?
- What changed when the definitive regime started on 1 January 2026?
- When do companies actually have to start paying for CBAM certificates?

The October 2025 Simplification

- What changed for CBAM in October 2025?
- Does the 50-tonne exemption mean my company doesn't need to comply at all?
- Does the exemption apply to electricity or hydrogen imports?

Cost

- How is the price of a CBAM certificate calculated?
- What has the CBAM certificate price actually been so far in 2026?
- Can we reduce our CBAM cost if a carbon price was already paid abroad?

Procurement's Role

- What does CBAM actually require from a procurement team, day to day?
- What happens if a supplier can't provide verified emissions data?

Germany-Specific

- Who is responsible for enforcing CBAM in Germany?

7. SEO and technical requirements

URL	/cbam-procurement-compliance-manufacturing (no date — evergreen)
Title tag	CBAM Compliance for Procurement Teams (2026) — 44 characters
Meta description	CBAM's definitive regime is live and the rules changed in Oct 2025. See what German manufacturers must do now. — 110 characters
Schema markup	FAQPage schema across the full 16-question set (Section 6) — the entire page is Q&A-structured, not just a bottom section, so schema coverage should reflect that; WebPage or Article schema for the page shell.
Update cadence	High — review at minimum quarterly , and immediately upon any new EC CBAM regulatory announcement. CBAM has already been amended once (Oct 2025) before the definitive regime even started, and a further scope expansion to downstream steel/aluminium products has been proposed for 1 Jan 2028. This is one of the fastest-moving topics in the whole project.
Canonical	Self-canonical. No date variants in the URL — but recommend a visible "last updated" date on the page itself, since the content (quarterly prices, thresholds) is inherently date-sensitive even though the URL stays evergreen.
Disclaimer	Required. This page covers real regulatory, tax, and customs obligations with financial and legal consequences. Include a clear, reader-facing disclaimer that this is general information, not legal, tax, or customs advice, and that readers should confirm their specific obligations with DEHSt or qualified counsel.

8. Recommended sources

- European Commission — *Price of CBAM certificates* (https://taxation-customs.ec.europa.eu/carbon-border-adjustment-mechanism/price-cbam-certificates_en)
- Regulation (EU) 2023/956 (the original CBAM Regulation) and Regulation (EU) 2025/2083 (the Omnibus simplification amending it) — official text via EUR-Lex
- DEHSt / German Environment Agency (Umweltbundesamt) — CBAM national competent authority pages (dehst.de, umweltbundesamt.de)

Source note: CarbonChain's gated compliance guide, CMS Law's legal-update series, and Austrian Standards' CBAM explainer were reviewed to confirm the competitive gap and cross-check figures — none should be cited or have their content or figures carried into the published piece. All factual claims must trace to the EC or DEHSt sources above. This brief was built from keyword exports covering "procurement compliance" (549 keywords) and "carbon border adjustment" (446 keywords, trimmed to 93 EU/DE-relevant terms). This document is not legal, tax, or customs advice.
