

Stop Manually Hunting for Risky Clauses. Use Claude to Find Them in Your Contracts.

MOFU · US · 1,500-1,800 words · Primary ranking opportunity: procurement contract risk management (KD 14)

Brief at a glance

URL slug	/claude-contract-risk-review (shortened from the original branded slug — see Section 2 note; carried no ranking keywords)
Content type	MD file / tutorial — Claude for Contracts spoke (per project brief)
Target word count	1,500-1,800 words — matches the tutorial format and the depth of the top-ranking competitor guides reviewed (11-22 min reads)
Target audience	Procurement / contract ops managers at mid-market to enterprise companies already running (or evaluating) JAGGAER’s S2P suite, who own contract compliance and expiry tracking. Already aware AI can review contracts — third-party content has educated the market — but haven’t seen a platform-native version. MOFU: comparing approaches, close to a demo/trial decision.
Funnel / geo / path	MOFU · US · User Path 2, 3 (carried over from the original stakeholder card — confirm before drafting)
Primary keyword	use Claude review procurement contracts expiry risk — stakeholder-specified topical anchor. This phrase returns ~0 measurable MSV; it drives the H1/title/framing but should not be relied on for organic traffic.
Secondary keywords	procurement contract risk management (90 MSV · KD 14) · procurement contract (480 MSV · KD 10) · procurement contracts (480 MSV · KD 47) · benefits of ai in procurement contract management (40 MSV · KD 33) · Claude contract analysis S2P tutorial (stakeholder-specified, ~0 MSV)
Pillar page link	Links to and receives a link from the AI in S2P pillar page
Publish priority	Medium-High — the topic and framing are set by the stakeholder brief; the SEO opportunity is layering in <i>procurement contract risk management</i> (real volume, KD 14) so the piece can rank on more than the branded phrase alone. Every top-ranking page for this problem today is third-party “DIY Claude prompting” advice with no procurement-platform-native alternative — this piece can own that gap.

1. Search intent analysis

The reader already understands that AI can review contracts — that education has been done for them by third-party guides (unofficial Claude how-tos, procurement training companies, no-code workflow blogs). What they don’t yet know is that this can run natively inside the procurement platform they already use, against their live contract register, instead of being something they’d have to build themselves with prompt templates and a separate tool. The single question they need answered: **“how do I get this without building it myself?”**

What the reader needs to leave with

- Manual contract review misses expiry deadlines, uninvoked rebates, and risky clauses because nobody has time to re-read every contract against actual supplier performance.
- Claude for Contracts runs this review natively inside JAGGAER, against the contract register you already have — no exporting documents to a separate AI tool or writing your own prompts.
- It’s built to flag expiry risk, non-compliant clauses, and auto-renewal traps automatically, and it improves because it’s tied to real contract and supplier data, not a one-off upload.
- Clear next step: run it against one live contract, or request a walkthrough.

SERP features to target

- Featured snippet — 2-3 sentence definition of what Claude for Contracts is and does, directly under the H1.
- People Also Ask — FAQ section (Section 6) covers the questions every competing “AI contract review” guide already answers, reframed for a platform-native context.

Every page currently ranking for this problem — an unofficial Claude Cowork guide, a procurement-training company’s playbook, two AI-workflow/no-code blogs — is a “how to prompt Claude yourself” guide, not a procurement-platform vendor. None of them address governance, live contract-register integration, or audit trail, which is exactly what a JAGGAER buyer will actually ask about. Lean into that gap in the comparison section (H2 5) rather than competing head-on with their generic keyword set.

Stakeholder note: the topic and primary keyword are set by the project brief, not derived from keyword volume — the phrase itself returns ~0 MSV. That’s fine; it’s functioning as a topical anchor for the H1/title, not a ranking bet. The job of this brief is to keep that framing intact while making sure procurement contract risk management and the other secondary terms are woven in naturally enough to actually surface in search.

2. Target keywords

Primary (topical anchor)

Keyword	MSV	KD	Intent
use Claude review procurement contracts expiry risk	~0	n/a	Stakeholder-set topic — drives H1/title/framing, not a traffic target

Supporting keywords — carry the actual search volume

Keyword	MSV	KD	Intent
procurement contract risk management	90	14	Informational / Commercial
procurement contract	480	10	Informational
procurement contracts	480	47	Informational
benefits of ai in procurement contract management	40	33	Commercial
Claude contract analysis S2P tutorial	~0	n/a	Stakeholder-set secondary keyword
ai contract review procurement	10	n/a	Informational
procurement contract review checklist	20	n/a	Informational
procurement contract review	20	n/a	Informational
ai contract review for procurement	10	n/a	Informational
ai assisted contract review procurement cost recovery	10	n/a	Informational
common contract compliance risks in procurement	20	n/a	Informational
vendor risk assessment tools ai public procurement contracts	20	n/a	Informational
best contract intelligence tools for procurement risk identification 2025 2026	10	n/a	Commercial
mitigating risks in procurement contract	0	n/a	Informational (FAQ-only)

Ultra-low KD callout: **procurement contract risk management** (KD 14) is the strongest single ranking opportunity in this cluster — real volume, low difficulty, directly on-topic. It won't appear in the H1 (fixed by the stakeholder brief), but it should appear naturally in the intro and in at least one H2.

URL and title tag correction: the original draft used the full branded phrase in the URL slug and dropped “contract” from the title tag entirely — the one word connecting the page to every keyword with real volume. Both are corrected in Section 7: the URL leads with “contract” and “risk,” and the title tag includes “Contract.” The H1 stays as the stakeholder-specified headline — only the URL and title tag (which readers never see as literal text) were optimized.

3. Recommended page structure

Element	Content guidance
H1 (Title)	Stop Manually Hunting for Risky Clauses. Use Claude to Find Them in Your Contracts
Meta title	Stop Hunting for Risky Contract Clauses — Claude (48 chars — includes “Contract,” the one word tying the page to every keyword with real volume)
Meta description	Manual procurement contract risk management doesn’t scale. See how Claude finds risky clauses and expiry traps automatically in your contracts. (143 chars)
Intro (150-200 words)	Open with a snippet-ready 2-3 sentence definition of what it means to use Claude to review procurement contracts for expiry and risk. Work “procurement contract risk management” in within the first 1-2 sentences. State who it’s for and preview the sections.
H2: Why Manually Hunting for Risky Clauses Doesn’t Scale	Pain-point framing: contracts get signed, filed, and revisited only when something breaks — by then the leverage is gone. Use “procurement contract review” naturally here. No visual needed.
H2: What Claude Actually Catches in a Procurement Contract	Capability walkthrough: summary, risk/expiry flagging, clause comparison — all inside JAGGAER. Primary visual goes here (Section 4). Work “benefits of ai in procurement contract management” in.
H2: A Step-by-Step Walkthrough: Finding Risky Clauses and Expiry Traps	The tutorial core — numbered, concrete steps. This is what justifies the “Tutorial” content type.
H2: What It Catches vs. What Still Needs a Human	Honest limitations — builds trust rather than overselling. What it reliably flags vs. what still needs legal/commercial judgment.
H2: Using Claude Inside JAGGAER vs. Prompting It Yourself	The differentiation section — native/governed workflow vs. generic Claude/Cowork prompting. Secondary visual here. Flag comparative claims for legal/marketing sign-off.
H2: FAQ	8 questions — see Section 6. 2-3 sentences each, self-contained.
H2: Next steps	Link to demo/trial CTA and 2-3 next cluster posts (Section 5). No new information here.

4. Visual production notes

Primary visual

Before/after workflow diagram: manual read (hours, standalone document) vs. Claude for Contracts (minutes, flagged risks land directly in your JAGGAER contract register). Appears under H2: What Claude Actually Catches, within the first two scrolls.

Secondary visual

Comparison table: “Claude for Contracts vs. DIY AI Contract Review.” Columns: capability / native in JAGGAER / generic Claude Chat / Claude Cowork + custom prompts. Appears under the differentiation H2.

Have product marketing confirm the exact capability claims in the comparison table before publish — this is the section most likely to draw a competitive rebuttal.

5. Internal linking plan

Destination	Anchor text	Placement
Pillar page — AI in S2P	“AI in Source-to-Pay”	Intro / Next steps
Product — JAGGAER AI (JAI)	“JAGGAER’s embedded AI platform”	What Claude Actually Catches
Product — Contract Management (S2C)	“JAGGAER Contract Management”	Step-by-Step Walkthrough
Solution — Supplier Compliance	“supplier compliance tracking”	Next steps
External source (TBC)	“Anthropic’s data-handling policy”	Differentiation section — if making a security claim

6. FAQ targets

Adapted from the question set every competing “AI contract review” guide already answers, reframed for a platform-native workflow.

- What is Claude for Contracts?
- Can I rely on AI to catch risky contract clauses automatically?
- Does Claude for Contracts replace legal or procurement review?
- Is my contract data secure when Claude reviews it?
- What file formats can Claude for Contracts read?
- How is this different from using Claude.ai or Claude Cowork directly?
- How long does an automated contract review take?
- Can it flag contracts approaching expiry or auto-renewal?

7. SEO and technical requirements

URL	/claude-contract-risk-review (no date — evergreen)
Title tag	Stop Hunting for Risky Contract Clauses — Claude (48 chars)
Meta description	Primary keyword near start + benefit + soft CTA — ≤155 chars
Schema markup	Article + FAQPage schema on the FAQ section
Update cadence	Review when JAGGAER ships new Claude for Contracts capabilities, or when Anthropic materially updates the underlying Claude model
Canonical	Self-canonical. No date variants.
Disclaimer	Recommended: a short note that AI-assisted review supports but does not replace legal or procurement counsel review — every competing piece in this space carries an equivalent disclaimer.

8. Recommended sources

- JAGGAER’s own product documentation for Claude for Contracts (internal — confirm current feature scope with product marketing before drafting).
- Anthropic’s security and data-handling documentation (anthropic.com/security) — use only for factual claims about data handling, verify current wording at draft time.

The competitor pages reviewed for this brief (an unofficial Claude Cowork guide, a procurement training company, two AI workflow blogs) are useful for understanding what’s currently ranking — they are not primary sources and should not be cited or have their figures/case studies carried into the published piece. All specific figures or capability claims must come from JAGGAER product documentation or Anthropic’s own materials. This brief is not legal advice.
