

3 S2P Tasks You Can Do in Claude Right Now — With Prompts and Outputs

MOFU · Geography: ALL · How-to guide · Cluster anchor piece

Brief at a glance

URL slug	/claude-s2p-tasks-prompts-outputs (technical slug only — H1 and framing untouched)
Content type	How-to Guide — Claude for Suppliers & Sourcing cluster anchor (per project brief)
Target word count	1,800–2,200 words — longer than the tutorial spokes (1,500–1,800) since this is the cluster anchor, matching the depth used for the Claude for Contracts anchor.
Target audience	Sourcing / procurement professionals evaluating whether Claude is worth using for real S2P work, not just generic AI curiosity. MOFU: they want to see actual prompts and actual outputs, not another "AI can help procurement" pitch.
Funnel / geo / path	MOFU · Geography: ALL · User Path 2 · Publishing Week 2 (per project card)
Primary keyword	Claude S2P tasks procurement prompts guide — stakeholder-specified, kept exactly as given. No measurable volume in the keyword tool (see Section 2). Drives H1/title/framing only.
Secondary keyword	AI sourcing contracts supplier procurement — stakeholder-specified, kept exactly as given. Also no measurable volume as an exact phrase.
Pillar page link	Links to and receives a link from the AI in S2P pillar page. As the cluster anchor , it should also link down to both existing spokes in this cluster (Alternative Suppliers by Country/Category; Auto-Generate an RFP from Your Sourcing Brief) — see the structural recommendation below and Section 5.
Publish priority	High — this is the cluster anchor and should publish alongside or just before its two spokes so the internal linking works both directions. The strongest competitor found (Molecule One's 200+ prompt library) sets a high bar for depth; differentiation is the "prompts <i>and</i> outputs" framing — see Section 1.

1. Search intent analysis

The reader has likely seen generic "AI can help procurement" content already and wants proof, not a pitch: specific tasks, the actual prompt used, and what a real output looks like. They are evaluating whether this is worth their own time, which means showing results matters more than explaining concepts.

Structural recommendation: since this is the cluster anchor and this cluster already has two confirmed spokes (Alternative Suppliers by Country/Category; Auto-Generate an RFP from Your Sourcing Brief), the cleanest architecture is for two of the three "tasks" in this piece to be short, worked demonstrations of exactly those two spokes — each with a "see the full walkthrough" link out — and the third task to be a genuinely new demonstration not yet covered elsewhere in the cluster. This makes the anchor function as an actual hub rather than a third disconnected piece. Proposed third task: **scoring supplier responses against an evaluation framework** — a natural continuation of the RFP spoke's output (the framework it produces) and not yet its own piece. Confirm this structure and the third task before drafting; it's a recommendation, not a confirmed plan.

What the reader needs to leave with

- Three concrete S2P tasks they can run in Claude today, each with the actual prompt shown, not paraphrased.
- A realistic sense of what the output looks like and how much editing it needs — not an oversold "it's done" claim.
- An understanding of where to go deeper on two of the three tasks (the existing cluster spokes) and how the third connects back to them.
- A clear next step: try one of the three prompts against their own sourcing work, or explore JAGGAER's native tooling for the same tasks.

SERP features to target

- Featured snippet — 2–3 sentence framing of what the three tasks are, directly under the H1.
- People Also Ask — FAQ section (Section 6), reframed around "can I actually use this" skepticism rather than generic AI-in-procurement questions.

Cannibalization flag: JAGGAER's own existing article, "What Claude Actually Delivers for Procurement in 2026," already covers Claude's capabilities across the S2P platform broadly, including the contract-review test (18 vs. 11 risk clauses). This new piece needs to stay narrower and more hands-on — three specific tasks with real prompts and outputs — rather than re-covering the same broad "what Claude delivers" ground. Cross-link rather than duplicate.

Competitive bar: Molecule One's "Procurement AI Prompt Library" (200+ prompts across 7 roles, full worked prompts shown, free downloads) is an extremely high-depth competitor and effectively the genre leader for "Claude prompts for procurement." This piece cannot out-volume that library and shouldn't try. The differentiation is in the title itself: **outputs**, not just prompts — show what a real result looks like, editing effort included, which the prompt-library format doesn't do. Also lean into the JAGGAER-native angle: these same tasks running inside the platform against real sourcing/contract data, not a blank Claude chat.

2. Target keywords

Primary & secondary (topical anchors — kept exactly as specified)

Keyword	MSV	KD	Intent
Claude S2P tasks procurement prompts guide	~0	n/a	Stakeholder-set primary — drives H1/title/framing, unchanged
AI sourcing contracts supplier procurement	~0	n/a	Stakeholder-set secondary — kept as-is, unchanged

This is a genuinely thin keyword space — the two keyword pulls supplied returned almost nothing with real volume, and nothing with confirmed low KD. Rather than pad the table with 0-volume long-tail noise (e.g. "ai sourcing and procurement in chemistry," "ai powered sourcing insights for procurement teams leaders" x3 near-duplicate variants), only the terms with actual signal are listed below.

Supporting keywords — the only three with real signal

Keyword	MSV	KD	Intent
ai in sourcing and procurement	90	55	Informational — best volume found, but a real stretch on difficulty
ai smart source to pay procurement software	70	37	Commercial — closest literal match to "S2P," moderate difficulty
chatgpt prompts for procurement	20	n/a	Informational — proxy signal only; currently branded to ChatGPT, not Claude

*Honest read: this cluster's anchor is not going to win meaningfully on organic volume alone — there simply isn't much search demand yet for "Claude prompts for procurement" as a phrase, though **chatgpt prompts for procurement** (20 vol) shows the underlying demand exists for the category, just attached to a different AI brand today. This piece's job is more about cluster architecture and conversion (see Section 1's structural recommendation) than about winning a keyword on its own. Note: unlike the other two supporting keywords, this one is not meant to appear verbatim in the copy — using "ChatGPT" phrasing in a Claude-focused piece would be misleading. It's included here as a demand signal only.*

3. Recommended page structure

Element	Content guidance
H1 (Title)	3 S2P Tasks You Can Do in Claude Right Now — With Prompts and Outputs (kept exactly as specified)
Meta title	3 S2P Tasks for Claude, With Real Outputs (41 chars)
Meta description	Three real S2P tasks you can run in Claude today — the exact prompt, the actual output, and what still needs editing. (117 chars)
Intro (150–200 words)	Open with a snippet-ready 2–3 sentence framing: three specific S2P tasks, shown with real prompts and real outputs, not another AI-in-procurement overview. Work "ai in sourcing and procurement" in naturally.
H2: Task 1 — Find Alternative Suppliers by Country or Category	Short worked demonstration: the prompt, a realistic (not fabricated-as-real) sample output, and honest editing notes. Close with a "see the full walkthrough" link to the existing spoke. Use "ai smart source to pay procurement software" naturally here.
H2: Task 2 — Auto-Generate an RFP from a Sourcing Brief	Same short-demo pattern. Prompt, sample output (an RFP excerpt, not a full 15–25 page document), editing notes. Close with a link to the existing RFP spoke. Primary visual goes here (Section 4).
H2: Task 3 — Score Supplier Responses Against an Evaluation Framework	The new task (see structural recommendation). Prompt, sample scorecard output, editing notes. This is the one task without its own dedicated spoke — give it slightly more depth than the other two.
H2: What All Three Have in Common	Tie the three tasks together: each works better with real context (category data, contract templates, evaluation criteria) already in the system, rather than assembled from scratch in a blank chat. This is the JAGGAER-native differentiation section. Secondary visual goes here (Section 4). Flag for product marketing sign-off.
H2: FAQ	8 questions — see Section 6.
H2: Next steps	Link to the pillar page and both cluster spokes explicitly (Section 5). No new information here.

4. Visual production notes

Primary visual

Side-by-side panel: the exact prompt text on the left, a realistic sample output excerpt on the right, for Task 2 (RFP generation). Appears under H2: Task 2, within the first two scrolls. Use a fictional or category-level example — no real supplier or company names.

Secondary visual

Simple three-row table: task / what context it needs / where that context already lives in JAGGAER. Appears under H2: What All Three Have in Common. This is the visual that carries the differentiation argument, so keep it factual and have product marketing confirm each row.

Do not present fabricated statistics or a "real" company as an example anywhere in this piece — every sample output should read as illustrative. Have product marketing confirm the JAGGAER-native integration claims before publish, same as the other two spokes in this cluster.

5. Internal linking plan

Destination	Anchor text	Placement
Pillar page — AI in S2P	"AI in Source-to-Pay"	Intro / Next steps
Spoke — "Find Alternative Suppliers by Country or Category"	"the full walkthrough for finding alternative suppliers"	H2: Task 1
Spoke — "Auto-Generate an RFP from Your Sourcing Brief"	"the full walkthrough for generating an RFP"	H2: Task 2
JAGGAER blog — "What Claude Actually Delivers for Procurement in 2026"	"the full picture of what Claude delivers across S2P"	Intro or Next steps
Product — JAGGAER Sourcing / JAGGAER AI (JAI)	"JAGGAER's embedded AI platform"	What All Three Have in Common

Action item: once this anchor publishes, update the internal-linking plans of both existing spokes so they link back up to this piece — the same pattern already applied between the Claude for Contracts tutorial and its own cluster context.

6. FAQ targets

- What kinds of S2P tasks can Claude actually handle today?
- How much editing does a Claude-generated output usually need?
- Do I need to give Claude my own data for these to work well?
- Is this different from using a generic prompt library?
- Can these tasks run inside JAGGAER instead of a separate Claude chat?
- How is scoring supplier responses different from generating the RFP itself?
- What shouldn't I trust Claude to decide on its own?
- Where do I go to try each of these tasks myself?

7. SEO and technical requirements

URL	/claude-s2p-tasks-prompts-outputs (no date — evergreen)
Title tag	3 S2P Tasks for Claude, With Real Outputs (41 chars)
Meta description	Topic-led opening + reader benefit + soft CTA — ≤155 chars
Schema markup	Article + FAQPage schema on the FAQ section
Update cadence	Review when either cluster spoke changes, or when JAGGAER's Claude integration adds new S2P capabilities worth featuring as a fourth task
Canonical	Self-canonical. No date variants.
Disclaimer	Recommended: note that all sample outputs are illustrative and that AI-generated work in these areas still requires procurement review before use.

8. Recommended sources

- JAGGAER's own product documentation for Sourcing, Contract Management, and JAGGAER AI (JAI) (internal — confirm current feature scope before drafting).
- Anthropic's official prompt engineering documentation (platform.claude.com/docs) — legitimate primary source for general prompting best practices (clarity, examples, step-by-step structure) if the piece references how to write a good prompt.

Source note: Molecule One's prompt library and Procurement Tactics' broader "Claude for Procurement" overview are useful for understanding the competitive bar and confirming there's no existing "prompts and outputs, tied to our own cluster" piece — they should not be cited or have their specific prompts, role structure, or examples carried into the published piece. This brief is not legal advice.
