

The Jaggaer S2P Claude Prompt Library: 20 Fundamental Queries Every Procurement Pro Needs

MOFU · Geography: ALL · By the Numbers · Cluster anchor piece

Brief at a glance

URL slug	/jaggaer-s2p-claude-prompt-library (technical slug only — H1 and framing untouched)
Content type	By the Numbers — S2P Prompt Library & Webinar Hub cluster anchor (per project brief). This is a scannable, numbered-list format, not a narrative tutorial.
Target word count	1,800–2,200 words — anchor-depth, but the format is list-driven (20 short entries) rather than long-form prose, so word count is a byproduct of entry count, not a target to write toward.
Target audience	Procurement professionals across the S2P lifecycle (sourcing, contracts, invoicing, supplier management) evaluating whether Claude has a real, ready-to-use foothold in their day-to-day work. MOFU: they want a concrete, branded reference list, not another generic AI-in-procurement explainer.
Funnel / geo / path	MOFU · Geography: ALL · User Path 2, 3 · Publishing Week 4 (per project card)
Primary keyword	S2P Claude prompt library procurement fundamental — stakeholder-specified, kept exactly as given. No measurable volume in the keyword tool (see Section 2). Drives H1/title/framing only.
Secondary keyword	Jaggaer GitHub S2P prompts Claude — stakeholder-specified, kept exactly as given. The literal mention of "GitHub" is a real content decision, not just phrasing — see the structural recommendation below.
Pillar page link	Links to and receives a link from the AI in S2P pillar page. This is a new cluster with no existing spokes yet — unlike the Claude for Suppliers & Sourcing anchor, there's nothing to link down to. Flag for the content calendar: this piece is seeding the cluster, not joining an existing one.
Publish priority	High — cluster anchor, and a genuine content gap exists (see Section 1). No competitor found offers a Claude-specific, S2P-specific, vendor-native prompt reference; the closest-ranking page for the actual target keywords is off-topic entirely.

1. Search intent analysis

The reader wants proof that Claude has concrete, ready-to-use applications across procurement — not five workflows, not 200 prompts organized by job title, but a tight, credible, vendor-backed reference list they can start using today. "Fundamental" in the title signals this is the starting-point list, not the exhaustive one.

Structural recommendation: the secondary keyword literally names "GitHub." Recommend actually hosting the 20 prompts in a public JAGGAER GitHub repository — plain text or markdown, one file per query or one structured file for all 20 — and having this article both explain the prompts and link out to the repo. This is a genuine differentiator: Una gates its prompt library behind a PDF download form, Molecule One gives PDF playbooks. A public, forkable, versioned GitHub repo is more credible to a technical/procurement-ops audience and creates an additional indexable, linkable asset beyond the article itself. Confirm feasibility with whoever owns JAGGAER's GitHub presence before committing to this in the final brief.

What the reader needs to leave with

- 20 concrete, usable Claude prompts spanning the S2P lifecycle — sourcing, contracts, invoicing, supplier management, spend — not just one narrow slice.
- Confidence that these are genuinely "fundamental" — a credible starting set, not an arbitrary grab-bag.
- Where to go for the full, hands-on walkthroughs already published in other clusters (Claude for Contracts, Claude for Suppliers & Sourcing) when a given query needs more depth than a single prompt can show.
- A next step: grab the prompts from GitHub (if built), or explore JAGGAER's native AI tooling for the same tasks.

SERP features to target

- Featured snippet — 2–3 sentence framing of what the 20-query library is and who it's for, directly under the H1.
- People Also Ask — FAQ section (Section 6), reframed around credibility and scope ("is this really fundamental," "how is this different from a generic prompt list") rather than generic AI-in-procurement questions.

Competitive gap: four competitors reviewed for this brief — Molecule One (200+ prompts, 7 roles, Claude + ChatGPT), Una (GenAI prompt library organized by procurement activity, but platform-agnostic and fairly generic), Procurement Tactics (broader "Claude for Procurement" overview), and JAGGAER's own existing article. None offer a tight, S2P-specific, Claude-specific, vendor-native "fundamentals" list. More tellingly: the page currently ranking for the closest real keywords ("claude prompt library," 170 vol/KD 28; "prompt claude," 50 vol/KD 40) is SurePrompts' generic 30-prompt Claude Projects library — engineering, writing, sales, ops, personal productivity. Zero procurement content. The actual top-ranking page for this keyword territory isn't even on-topic, which is a genuine opening.

Cannibalization flag: same as the other pieces in this pillar — JAGGAER's existing "What Claude Actually Delivers for Procurement in 2026" covers broad capability claims. This piece should stay in list/reference format (20 discrete queries) rather than re-explaining what Claude does broadly. Cross-link rather than duplicate.

2. Target keywords

Primary & secondary (topical anchors — kept exactly as specified)

Keyword	MSV	KD	Intent
S2P Claude prompt library procurement fundamental	~0	n/a	Stakeholder-set primary — drives H1/title/framing, unchanged
Jaggaer GitHub S2P prompts Claude	~0	n/a	Stakeholder-set secondary — kept as-is, unchanged; drives the GitHub recommendation above

Only two supporting data points were supplied for this brief, both from a competitive-position pull rather than a broad keyword-idea export. Presenting both rather than padding the table.

Supporting keywords — the two available data points

Keyword	MSV	KD	Intent
claude prompt library	170	28	Informational — head term; currently ranked by an off-topic competitor (see Section 1)
prompt claude	50	40	Informational — broad, same off-topic competitor currently ranks here

Read: these two terms are the best available signal, but note they're currently owned by a page with zero procurement relevance. Winning them outright may be difficult purely on topical authority grounds (the ranking page is a large, well-linked generic prompt site), but the more realistic path is capturing the long-tail combination — "claude prompt library" + "procurement" or "S2P" — which isn't contested by anyone found in this research. Recommend a follow-up keyword pull specifically on "claude prompt library procurement" and "claude prompts procurement" combinations before finalizing the draft.

3. Recommended page structure

Element	Content guidance
H1 (Title)	The Jaggaer S2P Claude Prompt Library: 20 Fundamental Queries Every Procurement Pro Needs (kept exactly as specified)
Meta title	Jaggaer's S2P Claude Prompt Library (20 Queries) (48 chars)
Meta description	20 fundamental Claude prompts for procurement, spanning sourcing, contracts, invoicing, and supplier management. (112 chars)
Intro (150-200 words)	Open with a snippet-ready 2-3 sentence framing: what this library is, who it's for, and why "fundamental" (a credible starting set, not an exhaustive one). Work "claude prompt library" in naturally. Note the GitHub repo if built.
H2: Sourcing & Supplier Discovery (Queries 1-4)	Four short entries: query text, one-line what-it-does, one-line sample output note. Link out to the existing "Find Alternative Suppliers" spoke where relevant.
H2: Contracts & Risk (Queries 5-8)	Four entries covering contract audit/review-style prompts. Link out to the existing Claude for Contracts tutorial and audit pieces where relevant.
H2: RFPs & Sourcing Events (Queries 9-12)	Four entries covering RFP generation and supplier evaluation. Link out to the existing "Auto-Generate an RFP" spoke where relevant.
H2: Invoicing, Payments & Spend (Queries 13-16)	Four entries covering the Procure-to-Pay side of S2P — new ground not yet covered by other cluster pieces. Primary visual goes here (Section 4).
H2: Supplier Management & Reporting (Queries 17-20)	Four entries closing out the list — supplier scorecards, spend summaries, stakeholder updates. Work "prompt claude" in naturally if it fits without reading as keyword-stuffed.
H2: Get the Full List	If the GitHub repo is built, this is where it's linked and explained (what format, how to fork/copy). Secondary visual goes here (Section 4) — a screenshot or preview of the repo.
H2: FAQ	8 questions — see Section 6.
H2: Next steps	Link to the pillar page and every existing spoke referenced above (Section 5). No new information here.

4. Visual production notes

Primary visual

Simple grouped index: five category headers (Sourcing, Contracts, RFPs, Invoicing/Payments, Supplier Management) each listing their four query titles, so a scanning reader can jump straight to the section they need. Appears near the top, right after the intro, within the first two scrolls.

Secondary visual

If the GitHub repo is built: a screenshot or styled preview of the repo file structure. If not built: a simple "copy this prompt" styled callout box design used consistently across all 20 entries.

Confirm with whoever owns JAGGAER's GitHub presence whether a public repo is feasible before the draft commits to it in copy. If not feasible, the secondary keyword should still be addressed honestly in the piece (e.g., "available as a copy-paste list below" rather than implying a repo that doesn't exist).

5. Internal linking plan

Destination	Anchor text	Placement
Pillar page — AI in S2P	"AI in Source-to-Pay"	Intro / Next steps
Spoke — "Find Alternative Suppliers by Country or Category"	"the full walkthrough for finding alternative suppliers"	Sourcing & Supplier Discovery section
Spoke — "Auto-Generate an RFP from Your Sourcing Brief"	"the full walkthrough for generating an RFP"	RFPs & Sourcing Events section
Spoke — "Stop Manually Hunting for Risky Clauses" (Claude for Contracts tutorial)	"the full contract-audit walkthrough"	Contracts & Risk section
JAGGAER blog — "What Claude Actually Delivers for Procurement in 2026"	"the full picture of what Claude delivers across S2P"	Intro or Next steps

This piece cross-links into two other clusters (Claude for Contracts, Claude for Suppliers & Sourcing), which is appropriate since it's positioned as a lifecycle-spanning reference — but confirm this doesn't create a confusing cluster-ownership picture. It may be worth explicitly noting in the CMS that this piece serves a cross-cluster indexing role.

6. FAQ targets

- What makes these 20 queries "fundamental" rather than just a random list?
- Do these prompts work outside of JAGGAER, in a plain Claude chat?
- How is this different from a generic ChatGPT or AI prompt list?
- Can I use these prompts without any special setup?
- Where can I get the full list to copy or fork?
- Do these cover the whole procurement lifecycle, or just one part?
- How often is this list updated?
- Where do I go for a deeper walkthrough on a specific task?

7. SEO and technical requirements

URL	/jaggaer-s2p-claude-prompt-library (no date — evergreen)
Title tag	Jaggaer's S2P Claude Prompt Library (20 Queries) (48 chars)
Meta description	Topic-led opening + reader benefit + soft CTA — ≤155 chars
Schema markup	Article + FAQPage schema on the FAQ section; consider ItemList schema for the 20 queries given the "By the Numbers" format
Update cadence	Review quarterly, or whenever a new cluster spoke publishes that should be cross-linked in from here
Canonical	Self-canonical. No date variants.
Disclaimer	Recommended: note that prompts are starting points and outputs should be reviewed before use, consistent with the other pieces in this pillar.

8. Recommended sources

- JAGGAER's own product documentation across Sourcing, Contract Management, Invoicing, and Supplier Intelligence (internal — confirm current feature scope before drafting).
- The three existing pieces in the AI in S2P pillar this article cross-links to (confirm final URLs before publish).

Source note: Molecule One, Una, Procurement Tactics, and SurePrompts were reviewed to confirm the competitive gap and should not be cited or have their prompts, structure, or examples carried into the published piece. This brief is not legal advice.
